1 The screen

Everything lives in one window. Four places to know.

The ribbon Across the top	Nine tabs, left to right: Home, Site, Draw, Openings, View, Interior, Landscape, Documents, AI Prompt. Click a tab and its tools appear on the shelf below it. This is where almost everything starts.
The tool rail Down the left edge	Icons for furniture and finishes. Click one and a panel slides out with the pieces you can place. What the rail offers changes with the building type you chose.
The viewport The rest of the window	Your building. Switch it between a 3D view, a 2D plan, both side by side, and a first-person walkthrough, from the Home tab.
The inspector Appears in the ribbon when you select something	Select a room, wall or object and its settings appear here — nudge, rotate, scale, replace, delete.

2 Starting a design

Seven ways in. All of them end in the same editable plan, so pick whichever suits what you already know about the plot.

Set the plot by hand Home tab	Choose a preset plot size or set width and depth with the steppers, then point the compass at the road your plot faces. Add rooms with one counter per room type — two bedrooms, one kitchen, and so on. The plan appears as you go.
Type exact dimensions Home tab → Plot Dimensions	If you have a surveyed figure like 33 ft 6 in, type it rather than stepping to it.
Describe an irregular plot Site tab	Walk the boundary one side at a time: how long each side runs, which way it turns at the corner, how far it bows. A live preview shows the shape and its area, and warns you if the boundary does not close.
Describe it in words AI Prompt tab	Type something like “30x40 north facing 2bhk with a store”. The plan is worked out from the sentence. Anything that cannot be built is listed back to you rather than quietly dropped.
Start from a photograph AI Prompt tab	Upload a photo of a floor plan and a similar plan is produced, using any dimensions printed on the drawing. Or upload a photo of a house from the street and its exterior style — storeys, colour, texture, glazing — is applied to a plan generated for your plot.
Start from a finished plan Home tab → Blueprint browser	Twenty ready-made house plans from 1BHK to 4BHK, and eight café layouts. Filter by the direction your plot faces and by plot size, then edit freely.
Start from nothing Home tab → Start from scratch	Clears the generated rooms and leaves a bare plot, for drawing your own walls.

3 The ribbon, tab by tab

Home

Plot and facing	Preset sizes, width and depth, and the compass for road direction.
Rooms	One counter per room type. Add or remove and the plan redraws.
Building type	Switch between a residence and a café. The room types, the furniture rail and the ready-made plans all change with it.
View switcher	3D view, 2D plan, both side by side, or walkthrough.
Auto-furnish	Fills every room with suitable furniture in one click. Turn it off for an empty shell.
Blueprint browser	The ready-made plan catalogue.
Reset layout	Back to a clean default.
Site	
Boundary	Describe the plot side by side, or drag its corners. Presets cover the common shapes — rectangle, cut corner, tapered, curved front.
Setbacks	The legal gap between your building and each plot edge, derived from plot size and road width.
Storeys	Ground, one, or two floors above. The staircase that connects them is placed for you.
Draw	
Wall drawer	Click point to point to draw your own walls. They snap to corners, edges and midlines as you go. Eight kinds: exterior, interior, glass, slatted, arched, curved, curved glass, curved slat.
Combine walls	Join drawn walls into one continuous run and choose how the corners meet — square, rounded or chamfered.
Room tagging	Draw an enclosure and name it, and it behaves like a room: it takes finishes, and it shows its area.
Draw a stair	Click the line a person would walk up — bottom, each turn, top — then press Enter. Two points give a straight flight, three a quarter or half turn, four a U. The number of steps comes from the real floor height, so a taller storey gets more steps rather than steeper ones. If the line cannot carry a legal staircase you are told why instead of being given an unsafe one.
Layout lock	Freezes rooms and walls so you cannot drag them by accident.
Openings	
Doors and windows shelf	Drag any door or window onto any wall.
Window shape	Change the shape of a window, its frame finish and its glass tint.
Window width	Crop a window span to slender, standard, wide or panoramic.

Glazing	Turn a whole wall to glass, or just the door in it.
Open up a wall	Turn a wall into an open passage with a beam over it, for an open-plan layout. Put it back the same way.
View	
Graphics	Quality presets from Low to Ultra, plus resolution, shadows and tone. The app already tunes itself to your machine; change these only if you want to.
Day and night	Swap between daylight and an evening scene with the interior lit.
Dollhouse cutaway	Slices the walls down to waist height so you can look into every room from above at once.
Photorealistic upgrade	Swaps the plain furniture for a fully detailed set.
Path tracer	A slow, photographic-quality render of the current view. Leave it running and it sharpens as it goes.
Drone tour	One button flies the camera: a slow orbit of the plot, down onto the front door, then room by room through the house and back out. Stop it any time.
Floor switcher	Ground, first, second, roof terrace.
Screenshot	Saves a high-resolution image of what you are looking at.
Interior	
Finishes	Floors, wall paint, wall texture and door colours, applied to one room or the whole house.
Design presets	A whole scheme in one click.
Wall paint bands	Splits one wall into up to six stripes so you can compare paint colours side by side on the real wall.
Room dimensions	A table of every room with its width and depth, editable.
Landscape	
Planting, ground, boundary	Eleven outdoor pieces in three panels. They drop anywhere on the plot, not just inside rooms — trees and hedges, paving and paths, compound wall, gate and lights.
Documents	
Seven drawings and schedules	Everything the project produces on paper: costs, furniture and finish schedules, clearances, wall elevations, the ceiling plan, the finish board and the blueprint sheet. Section 10 describes each one.
AI Prompt	

Describe or upload

Type a sentence, or upload a photo of a floor plan or of a house exterior. See section 2.

4 The tool rail

Down the left edge. Click an icon, a panel opens, drag a piece into the room. What you see depends on whether you are designing a residence or a café.

Residence panels

Living · Bed · Dining · Kitchen · Office · Decor · Divide

Café panels

Seating · Service · Back of house · Signage · Terrace · Decor

Finish

Always available

Floors, wall paint, door colours and whole-house themes.

Manage

Always available

Every object you have placed, in a list. Also: design a new piece of furniture by describing it, bring back built-in furniture you deleted, or clear everything you placed.

5 Working in 3D

Move a room

Drag it

The rest of the house stays where it is and the plan stays legal. Rooms cannot overlap or cross the legal boundary.

Resize the plot

Drag the handles at the plot edge

Width and depth, with the boundary checked as you drag.

Select anything

Click it

A room, a wall, a door, a window or a placed object. Its settings appear in the ribbon.

Move an object

Drag it, or use the arrow keys

Arrow keys nudge by half a foot. Objects snap to walls, room edges and midlines, and a guide line shows you what they snapped to.

Rotate, scale, duplicate

Inspector, or press R

R turns the selection 45 degrees.

Delete

Delete key, or the inspector

Removes the selected object, wall or opening.

Edit a wall

Click the wall

Change its length — which resizes the room — its thickness or its height, and cut openings through it: rectangular, rounded, arched or circular.

Minimap

Corner of the view

A small overhead map with your position on it.

6 Working in the 2D plan

The drafting view. Open it on its own from the Home tab, or press H to put it beside the 3D view — both show the same building, so anything you draw in one is already in the other.

Draw walls

Point to point, with snapping.

Place doors and windows	Click a wall to put one in.
Tag a room	Name an enclosure and show its area.
Draw a stair	Click the walking line, press Enter.
Reshape the plot Plot Shape	Drag a corner to move it, drag the dot on an edge to bow it, double-click a dot to add a corner, right-click a corner to remove one. Reset Shape returns to a rectangle.
Resize a room Drag its edge or corner	Hold and drag; press C to let a room crop itself at the plot boundary while you drag.
Rotate a room Select it, press R	Ninety degrees at a time.
Overlays	Turn dimension lines, room names and areas, and the setback boundary on and off.
Floor pills	Switch between ground, first, second and roof.
Zoom and fit	Zoom in and out, or reset the view to fit the plot.

7 Walking through the house

From the Home tab, switch the view to Walkthrough. You stand inside the house at eye level.

Move W A S D or the arrow keys	Hold shift to move faster. On a phone or tablet, use the on-screen pad.
Doors Walk up and press E, or click the door	Doors start closed and block you, as real doors do. They swing open and shut.
Lights Press F	Turns the interior lights on and off.
Where am I	The room you are standing in is named on screen, and the minimap shows your position and which way you are facing.
Jump to a room Click a room in the list	Moves you straight there.
Leave Press Esc	Returns you to the 3D view.

8 Objects you can place

Every piece below is dragged in from the tool rail, except doors and windows, which come from the Openings tab, and outdoor pieces, which come from the Landscape tab. Many arrive as detailed three-dimensional models.

Living

Tool rail → Living

Luxury 3-Seater Sofa · L-Shaped Sectional Corner Sofa · Curved Crescent Lounge Sofa · Compact 2-Seater Loveseat · Modern Accent Armchair · Leather Ergonomic Recliner · Marble & Gold Coffee Table · Floating TV Entertainment Wall · Bouclé Curved Living Set · Accent Lounge Chair · Upholstered Ottoman · Side Table · High-Back Carved Chair · Gallinera Low Table · Mid-Century Lounge Chair · Carved Hardwood Sofa · Modern Coffee Table · Tall Side Table · Small Console Table · Long Sideboard · Open Display Shelves

Bedroom

Tool rail → Bed

Grand King Bed with Headboard · Modern Platform Bed (Queen) · Single Bed with Side Table · Wooden Double Bunk Bed · 3-Door Full-Height Wardrobe · Dressing Vanity & LED Mirror · Bedside Nightstand · Day Bed · Tall Painted Cabinet

Dining

Tool rail → Dining

6-Seater Rectangular Dining Set · 4-Seater Round Dining Table · 10-Seater Nero Marquina Dining Set · Dining Chair · Painted Dining Chair · Round Dining Table · Folding Wooden Stool · Painted Bench

Kitchen

Tool rail → Kitchen

Kitchen Island & Bar Stools · Double-Door Smart Refrigerator · Curved Waterfall Kitchen Island · Floor-to-Ceiling Smoked Walnut Kitchen Wall · Counter Bar Stool · Four-Burner Hob · Microwave Oven

Bathroom

Tool rail → Bed, or placed automatically

Wall-Hung WC · Washbasin & Vanity · Glass Shower Enclosure · Soaking Bathtub

Office

Tool rail → Office

Executive Desk & Ergonomic Chair · Tall Open Bookshelf · Steel Office Desk

Decor

Tool rail → Decor

Indoor Botanical Planter · Curved Arc Floor Lamp · Geometric Area Rug · Fireplace & Recessed Bookshelf Wall · Architectural Planter Divider · Organic Pebble Brass Wall Mirror · Planter Box · Wide Ceramic Vase · Slim Ceramic Vase · Ornate Wall Frame · Standing Photo Frame · Wall Clock · Marble Bust

Lighting

Tool rail → Decor

Chandelier · Caged Pendant · Flush Ceiling Lamp · Articulated Desk Lamp · Tiered Crystal Chandelier · Globe Cluster Chandelier · Lantern Chandelier

Room dividers and feature walls

Tool rail → Divide

Full-Height Interior Partition · Half-Height Pony Wall · Acoustic Slatted Wood Screen · Crittall Glass Wall · Neoclassical Arched Divider · Curved Feature Wall · Curved Cylindrical Glass Wall · Curved Fluted Slat Wall · Grand Roman Arched Door · Curved Glass Revolving Entrance · Panoramic Curved Bow Window

Staircases

Draw tab → Stairs

Straight Flight · L-Shaped Quarter Turn · Dog-Leg Half Turn · Winder Quarter Turn · Floating Cantilever · Bifurcated Split Flight

Appliances and soft furnishing

Tool rail → Kitchen and Living

AC Condenser Unit · Ceiling Fan · Throw Cushion Set

Doors

Openings tab

Standard Flush Door · Grand Main Entrance Door · Double French Doors · Sliding Pocket Door · Sliding Glass Door · Open Archway Passage

Windows

Openings tab

Modern Slider · Palladian Roman Arch · French Colonial Grid · Panoramic Picture Window · Faceted Bay Window · Clerestory Privacy Slit · Round Porthole · Contemporary Corner Glass

Window frames

Openings tab → Window shape

Matte Black Aluminium · Warm Natural Oak · Antique Brushed Bronze · Crisp White UPVC · Gunmetal Steel · Brushed Brass

Window glass

Openings tab → Window shape

Clear Low-E · Azure Sky · Satin Frosted · Solar Bronze · Smoke Charcoal

Outdoors

Landscape tab

Tree · Palm · Hedge Run · Shrub · Planter Box · Paving Bay · Stepping Path · Gravel Bed · Compound Wall · Main Gate · Bollard Light

Café furniture

Tool rail, when the building type is Café

Two-Top Table · Four-Top Table · Communal Table & Benches · Banquette Bench Run · Window Bar & Stools · Lounge Armchair · Counter Bar Stool · Pastry Display Case · Espresso Machine & Grinder · POS & Till Stand · Condiment Station · Retail & Bean Shelf · Reach-In Fridge · Stainless Prep Table · Dry Store Racking · Ice Machine · Hanging Menu Board · A-Frame Chalkboard · Patio Set & Parasol · Terrace Rope Bollards · Bike Rack · Planter Room Divider · Pendant Light Cluster · Neon Wall Sign · Framed Art Set · Large Floor Plant · Open Book & Plant Shelf

Design a piece that is not here

Tool rail → Manage

Describe the furniture you want, or drop in a picture of it, and a three-dimensional version is built and placed on the plan. You can move, rotate, scale and delete it like anything else.

9 Finishes and materials

Applied to one room or to the whole house, from the Interior tab or the Finish panel on the tool rail.

Stone and tile floors

Italian Carrara White Marble · Nero Marquina Black Marble · Royal Botticino Gold Marble · Verde Oasis Emerald Marble · Classic Roman Travertine · Architectural Stone Pavers · Deep Oceanic Blue Glass Mosaic · Hexagonal Charcoal Slate · Moroccan Geometric Talavera · Polished Absolute Black Granite · Venetian Terrazzo Mosaic · Glossy Ceramic Subway Tile · Calacatta Quartzite Slab

Wooden floors

Nordic Blonde Oak Planks · French Chevron Blonde Oak · American Dark Walnut Planks · European Natural Oak · Burma Teak Chevron Parquet · Scandinavian Grey Ash · Herringbone Royal Mahogany

Wall paint

Crisp Arctic White · Warm Alabaster · Nordic Sage Green · Deep Royal Navy · Modern Charcoal Slate · Warm Indian Terracotta · Soft Champagne Gold · Pastel Dusty Rose

Wall textures

Smooth Matte Paint · Parisian Boiseries Panelling · Venetian Plaster · Vertical Teak Slats · Rustic White Brick · Natural Woven Linen · Industrial Polished Concrete

Door finishes

Rich Dark Walnut · Burmese Golden Teak · Nordic White Oak · Architectural Pure White · Industrial Matte Black · Royal Mahogany · Modern Sage Green · Colonial Navy Blue · Brazilian Rosewood · Urban Charcoal Grey

Whole-house themes

Interior tab → Design presets

Modern Scandinavian, Classic Indian Heritage, Minimalist Industrial, Mediterranean Villa, Architectural Studio.

Paint stripes on one wall

Select a wall → Wall bands

Divides the wall into two to six stripes so you can compare colours in place before choosing.

10 Drawings and schedules

All under the Documents tab. Each one is drawn from your building as it stands, so they are never out of date. Each can be saved or printed.

Costs and quantities

Documents → BOQ

What the house is made of and what it costs: floor area, brickwork, cement, steel, plaster, flooring, paint, doors and windows, plumbing and labour, itemised and totalled. Choose Economy, Standard or Luxury and every rate changes. Save as a spreadsheet or print.

Furniture schedule

Documents → FF&E Schedule

Every piece of furniture and fitting, room by room, with quantity, size in feet-inches and millimetres, and finish. The list a joiner or supplier works from.

Finish schedule

Documents → FF&E Schedule

Room by room: the floor, the wall paint, the wall texture, the door finish, the floor area and the area to be painted.

Clearances

Documents → Clearances

Checks that you can actually walk through the rooms you have furnished: the gap between pieces, between a piece and a wall, and the clear floor inside each door. Anything too tight is listed worst first, with the measurement and what it should be.

Wall elevations

Documents → Elevations

Each wall of each room drawn flat and straight on, as seen standing in the room: the doors and windows with their heights, the furniture against it, and dimensions along and up the wall. The drawing a carpenter needs and a floor plan cannot give.

Ceiling plan Documents → Ceiling Plan	The ceiling of each room with its lights and fans, a suggested downlight layout, and the light level each room will actually reach compared with the recommended level for that kind of room.
Finish board Documents → Finish Board	The whole scheme on one page: the colour palette, swatches of every floor, paint and finish, and every piece of furniture drawn at the same scale so you can judge sizes against each other. One board for the house or one per room.
Blueprint sheet Documents → Export	The floor plan as a proper drawing: title block, room schedule, dimensions and a north arrow, in three styles. Save as an image, or print.

11 Saving and sharing

Automatic saving Nothing to do	Your design is kept in the browser as you work and is still there when you come back. It stays on your machine.
Save to a file Home tab → Export	Writes the whole design to a file you can keep or send. Load it back the same way.
Undo and redo Ctrl+Z	Steps back through everything you have changed.
Images and drawings Documents tab, or View → Screenshot	Every drawing saves as an image or a spreadsheet, or prints.

12 Shortcuts

None of these are required — everything has a button. They are here because they are quicker.

H	Show the 2D plan beside the 3D view
G	Graphics settings
P	Photographic render
U	Photorealistic furniture
L	Day and night
R	Rotate what is selected
Arrow keys	Nudge what is selected
Delete	Remove what is selected
C	In the 2D plan: let a room crop at the boundary while you drag
Enter	In the 2D plan: finish the staircase you are drawing
Ctrl+Z	Undo
Esc	Close, cancel, or leave the walkthrough
W A S D	Walk, in the walkthrough

E	Open a door, in the walkthrough
F	Interior lights, in the walkthrough
